CERTIFICATE

This is to certify that the Lab work entitled "Database Management Systems (23CS3PCDBM)" carried out by **DAIVYA PRIYANKKUMAR SHAH (1BM23CS084),** who is bonafide student of **B. M. S. College of Engineering.** It is in partial fulfillment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belgaum during the year 2024. The Lab report has been approved as it satisfies the academic requirements in respect of a Database Management Systems (23CS3PCDBM) work prescribed for the said degree.

Insurance Database

Question

(Week 1)

- PERSON (driver_id: String, name: String, address: String)

- CAR (reg_num: String, model: String, year: int)

- ACCIDENT (report_num: int, accident_date: date, location: String)

- OWNS (driver_id: String, reg_num: String)

- PARTICIPATED (driver_id: String,reg_num: String, report_num: int, damage_amount: int)

- Create the above tables by properly specifying the primary keys and the foreign keys. - Enter at least five tuples for each relation

- Update the damage amount to 25000 for the car with a specific reg_num (example 'K A053408') for which the accident report number was 12.

- Add a new accident to the database.

- To Do

- Display Accident date and location
- Display driver id who did accident with damage amount greater than or equal to Rs.25000

QUESTION
(WEEK 3)

- Create the above tables by properly specifying the primary keys and the foreign keys.

- Enter at least five tuples for each relation.

- Display the branch name and assets from all branches in lakhs of rupees and rename
  The assets column to 'assets in lakhs'.

- Find all the customers who have at least two accounts at the same branch (ex.SBI_residencyroad).

- Create a view which gives each branch the sum of the amount of all the loans at the branch.
